

Math Review for YouCubed

By a Grade 2 Teacher

That's what mathematicians do!

This shirt sat in my closet. I loved it when I saw it and ***had to have it***...who doesn't appreciate PI?

However, I didn't have the confidence to wear this shirt because I questioned myself as a mathematical person. For the first time, because of **YouCubed**, I WILL wear this shirt with *confidence and feel empowered!*

That's what mathematicians do!

YouCubed taught me how fun and collaborative math is...

I especially loved the freedom to explore **math** from a visual, constructive lens.

I loved being called a mathematician and hearing affirmations from my teammates that my thinking process was tangible and meaningful.

The development of math tasks and curriculum was transformative.

Math has become more playful, interactive, and practical.

My hopes and plans for next year...

Math will be presented with confidence.

My goal is to do a brilliant job of connecting the big ideas to concrete applications.

Feeling **math**, living and breathing an environment of **math**, will empower repeated habits for students to develop constructive thinking.

I hope to create **"unstoppable math"** -THANK YOU YouCubed!
